1. PERMIT INFORMATION:

☐ The installation of a photovoltaic solar electric system requires a permit.

☐ **Homeowners Association:** If the property is regulated by a Home Owners Association, any exterior work must have written approval of the Association and the written approval must be attached to the permit.

☐ A solar permit does not include replacement or upgrading of the existing electrical panel or service (please indicate on the Building Permit Application and Photovoltaic Checklist whether an upgrade or replacement panel will be needed).

☐ A Building Permit may be issued only to a State of California Licensed Contractor or the Homeowner. All persons applying for or picking up permits shall have an authorization letter from the applicant stating that this person is acting as their personal representative.

☐ If the work is performed by the Homeowner personally or by his/her workers, and an inspection indicates the work cannot be completed satisfactorily, then a licensed contractor must perform the work.

☐ If the Homeowner hires workers, State Law requires the Homeowner to obtain Worker’s Compensation Insurance. Proof of this insurance is required prior to inspection.

2. INSTALLATION REQUIREMENTS

☐ Equipment must be installed in accordance with its listing and the manufacturer's installation instructions [CEC 110.3(B)].

☐ All work shall comply with CEC Article 690 *Solar Photovoltaic.*
3. **PLAN REQUIREMENTS**

Plans need to be submitted containing the following items:

- Plan view showing location of the PV installation and layout of existing roof framing members that support the solar panel system, or site plan if panels are not mounted on the roof.
- Details on mounting of PV modules, type and number of roof coverings, and subsequent weatherproofing of the roof.
- Electrical single-line diagram clearly identifying all devices installed in the PV system and indicating total kVA rating of the system.
- Clearly identify the point of interconnection with the utility supplied wiring system and provide details on main breaker, PV breaker and rating of bussing.
- Indicate type and size of all conduit and conductors throughout the PV system.
- Provide manufacturer’s cut-sheets and installation instructions for all PV modules, mounting systems, combiner boxes (if used), inverters, rapid shutdown devices, and disconnects.
- Provide structural calculations, prepared by a registered California design professional, if the total weight of the photovoltaic system is over five pounds per square foot.
- The installation of the PV system shall conform to the requirements of CEC Article 690 and any other applicable articles or standards.
- A sample of the plan view and electrical one-line diagram pages are attached.

4. **FIRE DEPARTMENT REQUIREMENTS**

**Signage**

- See item #5 below.

**Roof access for venting:**

- Ridge clearance: Modules should be located no higher than three feet (3') below the ridge.
- Residence or building with single ridge (gable roof): Modules shall be located in a manner that provides two (2) three-foot (3') wide access pathways from the eave to the ridge on each roof slope where modules are located.
- Residence or building with hip roof layouts: Modules shall be located in a manner that provides one (1) three-foot (3') wide clear access pathway from the eave to the ridge on each roof slope where modules are located. The access pathway should be located at a structurally strong location on the building.
- Residence or building with hips and valleys: Modules should be located no closer than one and one half foot (1.5') to a hip or a valley.
5. **SIGNAGE**

- All warning signs shall be red background with white 3/8” lettering, all capital letters, Arial or similar font. Material used for signage must be weather resistant. It is recommended that Underwriters Laboratories Marking and Labeling System 969 (UL 969) be used as standard to determine weather rating. Labels on raceways and other equipment shall be reflective, weather resistant, and suitable for the environment. (State Fire Marshal)

- Premises having PV systems shall be identified. The marking (signage) may be placed within the main service disconnect. If the main service disconnect is operable with the service panel closed, the marking should be placed on the outside cover. Marking shall conform to the following: (State Fire Marshal)

  ![CAUTION! SOLAR ELECTRIC SYSTEM CONNECTED](image)

- Marking is required on all interior and exterior DC conduit, raceways, enclosures, cable assemblies, and junction boxes to alert the Fire Service to avoid cutting them, every 10 feet, at turns and above and/or below penetrations and all DC combiner and junction boxes. Marking shall conform to the following: (State Fire Marshal)

  ![CAUTION! SOLAR CIRCUIT](image)

- Appropriate signage shall be provided to identify the main A/C disconnect for the solar system (State Fire Marshal).

  ![PHOTOVOLTAIC SYSTEM AC DISCONNECT](image)

- Where all terminals of the disconnecting means may be energized in the open position, a warning sign shall be mounted on or adjacent to the disconnecting means (CEC 690.17).

  ![WARNING](image)

- Ungrounded photovoltaic power systems shall be labeled with the following warning at each junction box, combiner box, disconnect, and device where energized, ungrounded circuits may be exposed during service: [CEC 690.35(F)]
The following sign shall be installed at the dc photovoltaic disconnecting means: (CEC 690.53)

<table>
<thead>
<tr>
<th>PHOTOVOLTAIC SYSTEM DC DISCONNECT</th>
</tr>
</thead>
<tbody>
<tr>
<td>RATED MAX. POWER-POINT CURRENT:</td>
</tr>
<tr>
<td>RATED MAX. POWER-POINT VOLTAGE:</td>
</tr>
<tr>
<td>MAXIMUM SYSTEM VOLTAGE:</td>
</tr>
<tr>
<td>SHORT-CIRCUIT CURRENT:</td>
</tr>
<tr>
<td>CONTROLLER MAX. RATED OUTPUT CURRENT:</td>
</tr>
</tbody>
</table>

Photovoltaic power systems employing energy storage shall also be marked with the maximum operating voltage, including any equalization voltage and the polarity of the grounded circuit conductor (CEC 690.55).

All buildings and structures with both utility service and a PV system, complying with CEC 690.12, shall have a permanent plaque or directory including the following wording: PHOTOVOLTAIC SYSTEM EQUIPPED WITH RAPID SHUTDOWN The plaque shall be reflective, with all letters capitalized and having a minimum height of 9.5mm(3/8 in), in white on red background.

All interactive system(s) points of interconnection with other sources shall be marked at an accessible location at the disconnecting means (CEC 690.54). Equipment containing overcurrent devices in circuits supplying power to a busbar or conductor supplied from multiple sources shall be marked to indicate the presence of all sources [CEC 690.64(B)(4)].

Any structure or building with a photovoltaic power system that is not connected to a utility service source and is a stand-alone system shall have a permanent plaque or directory installed on the exterior of the building or structure at a readily visible location. The plaque or directory shall indicate the location of system disconnecting means and that the structure contains a stand-alone electrical power system. (CEC 690.56(A)

Buildings or structures with both utility service and a photovoltaic system shall have a permanent plaque or directory providing the location of the service disconnecting means and the photovoltaic system disconnecting means if not located at the same location [CEC 690.56(B)].

Unless the panelboard is rated not less than the sum of the ampere ratings of all overcurrent devices supplying it, a connection in a panelboard shall be positioned at the opposite (load) end...
from the input feeder location or main circuit location. The bus or conductor rating shall be sized for the loads connected in accordance with CEC Article 220. A permanent warning label shall be applied to the distribution equipment with the following: [CEC 690.64(B)(7)]

**WARNING**
INVERTER OUTPUT CONNECTION
DO NOT RELOCATE THIS
OVERCURRENT DEVICE

6. **SMOKE ALARMS, CARBON MONOXIDE ALARMS & SPARK ARRESTERS:**

- In single family and multi-family residences (including townhomes, condominiums and apartments), installation of smoke alarms, carbon monoxide alarms and spark arresters on all chimneys is required prior to the final inspection as follows:

  - **Smoke Alarms** listed in accordance with U.L. 217 and listed and approved by the California State Fire Marshal must be installed if they do not already exist in each sleeping room, outside each separate sleeping area in the immediate vicinity of the bedrooms and on each story of the dwelling. For R-3.1 occupancies, refer to CBC Section 907.2.11.2 for additional requirements. (CRC R314)

    - **Power source:** Smoke alarms shall receive their primary power from the building wiring and shall be equipped with a battery backup. Smoke alarms shall emit a signal when the batteries are low. Alarm wiring shall be directly connected to the permanent building wiring without a disconnecting switch other than as required for overcurrent protection. Smoke alarms are permitted to be solely battery operated in existing buildings where no construction is taking place and in existing areas of buildings undergoing alterations or repairs that do not result in the removal of interior walls or ceiling finishes exposing the structure, unless there is an attic or crawl space available which could provide access for building wiring without the removal of interior finishes.

    - **Interconnection:** Where more than one smoke alarm is required to be installed within an individual dwelling unit or sleeping unit, the smoke alarms shall be interconnected in such a manner that the activation of one alarm will activate all of the alarms in the individual unit, except interconnection is not required in buildings that are not undergoing alterations, repairs or construction of any kind and where alterations or repairs do not result in the removal of interior wall or ceiling finishes exposing the structure, unless there is an attic or crawl space available which could provide access for interconnection without the removal of interior finishes. The alarm shall be clearly audible in all bedrooms over background noise levels with all intervening doors closed.

  - **Carbon Monoxide Alarms:** An approved carbon monoxide alarm listed as complying with UL 2034, approved and listed by the California State Fire Marshal, installed and maintained in accordance with NFPA 720 and the manufacturer’s instructions shall be installed if they do not already exist in existing dwellings or sleeping units having a fossil fuel-burning heater or appliance, fireplace or an attached garage as follows: outside each separate dwelling unit sleeping area in the immediate vicinity of bedroom(s) and on every level of dwelling unit. Carbon monoxide detection systems that include carbon monoxide detectors and audible notification appliances, installed and maintained as required for carbon monoxide alarms and NFPA 720 shall be permitted. The carbon monoxide detectors shall be listed as complying with UL 2075. (CRC R315)
- **Power supply and Interconnection:** Refer to the requirements above for smoke alarms for connection to the building wiring, exceptions allowing battery only alarms and interconnection of the alarms when more than one is installed.

- **Spark arresters:** When the value of the work exceeds $1,000, a spark arrester must be installed on fireplace chimneys if one does not already exist per MMC Section II-3-2.06. Spark arresters shall be constructed in conformance with CRC Section 1003.9.1.

  - If access to the interior of the dwelling by the Building Inspector cannot be scheduled for inspection of the smoke and carbon monoxide alarms and the work being performed is exterior only (such as re-roofing, re-siding, patio covers, swimming pools and the like), a “Smoke Detector & Carbon Monoxide Self-Certification Form” can be signed by each property owner and provided to the inspector prior to final inspection.

7. **INSPECTION PROCEDURES**

  - A rough inspection shall be scheduled if any work is inside walls or ceilings and will be covered with finish materials. A final inspection should be scheduled after all work is complete. For each inspection, the Permit Card and the Approved Job Copy of the Drawings must be presented to the inspector. Permits expire 180 days after the last passed inspection.

  - All commercial projects require a final inspection and approval from the Fire Department prior to the final inspection being performed by the Building Department. Call (408) 846-0451 to schedule. Note: Inspections must be scheduled 24 hours in advance.

  - The contractor or owner must provide roof access (ladder to roof) for all required inspections. Ladders must be OSHA approved, minimum Type I with a 250 lb. rating, in good condition and designed for its intended use. All ladders shall be properly secured in place.

8. **QUESTIONS:**

  - If you have any questions regarding your project contact the Building & Safety Department at (408) 846-0451.
PV ARRAY LAYOUT & WIRING PLAN

PER CALIFORNIA OFFICE OF THE STATE FIRE MARSHAL
A MINIMUM OF 3'-0" IS REQUIRED BETWEEN THE EDGE OF
THE PHOTOVOLTAIC ARRAY, THE EDGE OF THE ROOF
AND THE EDGE OF THE ROOF PEAK

MOUNTING NOTES:
1. PANELS MOUNTED ON ALUMINUM RACKING
2. PV ARRAY MOUNTS TO ROOF STRUCTURE WITH 5/6" LAGS
   EMBEDDED 2 1/2" INTO RAFTERS OR SEE NOTE 5 BELOW
3. PV PANELS ARE ANCHORED @ 48" O.C.
   TRUSSES/RAFTERS ARE 24" O.C. OR SEE NOTE 5 BELOW
4. WEIGHT OF PV MODULES AND ASSEMBLY
   SHOULD BE LESS THAN 5 LBS PER SQUARE FOOT
5. ALL INSTALLATION MUST COMPLY WITH MANUFACTURER'S
   INSTALLATION INSTRUCTION.

ARRAY CONDUIT & WIRING ARRANGEMENT
1- FREE-AIR 1/2" CONDUIT SLEEVE **
(2) #12 AWG; R, W
2- TO DC DISCONNECT
   1/2" CONDUIT
(4) #12 AWG; (2) R, (2) W
(1) #8 GNE

** SLEEVE PROVIDES PROTECTION FROM PHYSICAL
   DAMAGE PER NEC 300.13 & 300.18

City of Gilroy
SOLAR PANEL INSTALLATION
NOTE 'A'
Main Service Disconnect
For residential applications, the marking may be placed within the main service disconnect. If the main service disconnect is operable with the service panel closed, the marking should be placed on the outside cover.

Marking Content and Format
Marking content: Caution: Solar Electric System connected background: Red background, letters: White lettering, minimum 3/8" letter height, all capital letters, Arial or similar font, non-bold, material: Reflective, weather resistant material suitable for environment (adhesive materials may meet this requirement)

NOTE 'B'
Marking for direct current conduit, raceways, enclosures, cable assemblies, and junction boxes
Marking is required on all interior and exterior DC conduit, raceways, enclosures, cable assemblies, and junction boxes to alert the fire service to avoid cutting them. Marking should be placed on all interior and exterior DC conduit, raceways, enclosures, and cable assemblies. Every 10 feet, at turns and above and/or below penetrations and all DC combiner and junction boxes.

Marking Content and Format
Marking content: Caution solar circuit background: Red background, letters: White lettering, minimum 3/8" letter height, all capital letters, Arial or similar font, non-bold, material: Reflective, weather resistant material suitable for the environment (adhesive materials may meet this requirement)

General Note
1. Bond PV system and PV rail assembly to service equipment
2. Connect AC to customer service via 1 DP 60 15 Amp breaker
3. Electrical installation in accordance with 2010 California Electrical Code
NEED 3' AT THIS RAKE ALSO TO PROVIDE ACCESS AT TWO SIDES

RESIDENTIAL BUILDINGS WITH GABLE ROOF LAYOUTS:

RESIDENTIAL BUILDINGS WITH A SINGLE RIDGE: MODULES SHOULD BE LOCATED IN A MANNER THAT PROVIDES TWO (2) THREE-FOOT (3') WIDE ACCESS PATHWAYS FROM THE EAYS TO THE RIDGE ON EACH ROOF SLOPE WHERE MODULES ARE LOCATED.

City of Gilroy
SOLAR PANEL INSTALLATION
RESIDENTIAL BUILDINGS WITH HIP ROOF LAYOUTS:

Modules should be located in a manner that provides one (1) three-foot (3') wide clear access pathway from the eave to the ridge on each roof slope where modules are located. The access pathway should be located at a structurally strong location on the building (such as a bearing wall).

City of Gilroy
